

Dear Hiring Manager,

I am excited to apply for the Design Engineer position at Atlas Copco Group, even though my background is in Aeronautical Engineering. I am confident that my skills and experience can be applied to this role and add value to your team.

As an Aeronautical Engineer, I have a strong foundation in engineering principles, particularly in the areas of design, analysis, and testing. During my studies, I have gained experience in using design software such as CATIA to create detailed 3D models of aircraft components and systems. Additionally, I have been involved in various research projects, including the design of an advanced UAV and wing morphing, which have allowed me to gain experience in working with complex systems.

Although I have no direct experience with pumps, I am confident that my skills and knowledge can be transferred to this role. I am a quick learner, and I believe that I can adapt to new challenges and technologies. Furthermore, I have strong analytical and problem-solving skills, which I have honed through my studies and projects. I believe that these skills will enable me to analyze complex pump systems and identify areas for improvement.

Finally, I am passionate about engineering and have a strong desire to be a part of an innovative and dynamic team. My long-term goal is to become a proficient design engineer and make a valuable contribution to the success of an established company like Atlas Copco Group.

Thank you for considering my application. I look forward to discussing my qualifications in more detail during an interview.

Sincerely,

Mohammed Moin
